

## The Evolving Virtual Library: Visions and Case Studies (Supplements to Computers in Libraries, No 74)

An advanced trend in library automation is the development of virtual collections, aggregations of materials accessible electronically, but not necessarily located on-site. This text results from a session of the Computers in Libraries 1993 Conference and explores various libraries experiences. It includes contributors from a range of libraries internationally who discuss their experiences in developing and enhancing electronic collections within the context of traditional library materials.
