

Sigmund Freud A Pictorial Biography for Students

Sigmund Freud was born on May 6, 1856 and died on September 23, 1939. He was an Austrian neurologist who became known as the founding father of psychoanalysis, and was a leading figure of the 20th century. Freud's contributions to modern thinking were numerous, including breakthrough work in the areas of personality structure, the unconscious mind, and the use of free association in psychoanalysis. Although some of his work was controversial and much of it has been heavily modified or rejected altogether, it is important to learn about and understand his key role in the development of our understanding of ourselves and others. This book is an introduction to the life and work of Sigmund Freud. It is presented as an imaginary dialogue between a student and Freud. Readers can follow along and learn about his theories and why he is such a significant figure. The book also includes a number of photos. A study guide presents a list of books selected to help the student explore more about Freud and the development of modern psychology.
