

Energy Policies of IEA Countries Ireland: 2007

Ireland's remarkable economic growth over the last 15 years had strong effects on the energy sector. Due to rapidly increasing demand, Ireland has become much more dependent on international energy markets than it was in the past. This review analyses the energy challenges facing Ireland and suggests solutions, focusing on moving ahead with market reform and increasing the energy efficiency of the Irish economy. Establishing the All-Island electricity market will be of critical importance. Sharper focus on energy efficiency in all sectors of the economy, but in particular in transport and buildings, must be a priority. Finally, to achieve its ambitious goals for renewables in energy supply, Ireland will have to provide ample resources for research and development, to allow technologies such as ocean power to move from the laboratory to the market.

Table of Content :

1. Executive Summary
2. General Energy Policy
3. Energy and the Environment
4. Energy Efficiency
5. Renewables and Non-Conventional Fuels
6. Electricity
7. Fossil Fuels
8. Energy Technology and Research Development

Annex A. Organisation of the Review
Annex B. Energy Balances and Key Statistical Data
Annex C. International Energy Agency Shared Goals
Annex D. Glossary and List of Abbreviations
