

## Benefits of E-Government Initiatives

This report provides information regarding E-Government initiatives funded through agency contributions, and does not include all Federal government shared services. Agency contributions include commitments of funding and/or in-kind contributions, which represent the dollar-equivalent of a contribution of services, equipment, facilities, software, license fees, or Full-Time Equivalent (FTE) personnel support. Because the Act requires the report to include E-Government initiatives sponsored by OMB, initiatives funded through a fee-for-service model in which reimbursements represent transfers of funds by agencies to a service provider in exchange for a service rendered are not included in this report.
