

## Wind Machines (The MITRE energy resources and environment series)

The wind. If fully exploited in the years to come, it could supply more energy than the world uses today from all its sources. Right now, technology exists to generate electricity, heat homes, process food, pulp paper, manufacture textiles and other industrial and agricultural materials. . . Anyone concerned with the depletion of our natural resources will find this book a sun mine of information on the current technology and future possibilities of wind power. Written by one of the world's leading experts in the field This excerpt is taken from inside of the dust jacket. It also covers topics from the history of wind machines. The Economic Viability, public Acceptance, Wind Availability, Current Research and Development and the Applications. This book has several charts and tables. There are several pictures all in black and white.
